Who: Divik/Karan

Note: please make sure you fill all information related to your project be

ID	Scenario Title	Status
1	Startup page	Pass
2	Product notification	Pass
3	Add to cart functionality	Failed
4	Checkout process	Pass
5	Mobile responsiveness	Pass
6	Search functionality	Failed
7	User login/signup	Pass
8	Wishlist saving	Pass

Application: KDIV Limited

low and convert/include link to Wiki Or readme.md (GitHub)

Scenario

Given the user accesses the website, when the homepage loads, then the banner and menu should appear clearly.

Given the user visits a product page, when stock is low, then a notification should appear.

Given a user selects a smartwatch, when they click "Add to cart", then the item should be added.

Given items are in the cart, when the user proceeds to checkout, then they can complete the purchase.

Given various smartwatch devices, when the site loads, then it should display correctly.

Given the user is on the homepage, when they use the search bar, then search results should appear.

Given the user has no account, when they register or log in, then they can access personal features.

Given a logged-in user, when they click "Add to wishlist", then the item is saved to their list.

Remarks

Given the page loads, when viewing the layout, then it is mobile-optimized and loads quickly.

Given the product page is open, when stock alert triggers, then it shows a clear notification.

Given the user is on iOS Safari, when they click "Add to cart", then an error occurs.

Given the checkout is completed, when the order is placed, then an email is received.

Given different screen sizes, when browsing the site, then content scales properly.

Given the user is on Android WebView, when they use search, then it does not respond.

Given multiple login methods, when used, then they all work successfully.

Given an item is wishlisted, when accessed later, then it appears across devices.
